New Tapur beta version 4.2 released !!

This beta version is offered by the following link only.

Tapur 4.2 beta

*This version doesn't support Skype 5.0 video.

(* important)

Skype5.0 may be hung up with using Tapur2.3 often.
After uninstall Tapur2.3, install Tapur4.2beta.

If you install as public user of windows, install by administrator privilege. The following improvement was added to a previous version.

<2.3x -> 4.2x>

(New feature)

- + Quality improvement of video recording (smoother video).
- + Video recording : Real time combination of video and audio.
- + Video recording : auto separation.
- + Video recording : includes no window that are layered on video (Win7 only).
- + Extension program : FTP forwarding.
- + Extension program : works for recorded data too.
- + PC Migration tool for PC update.
- + Volume adjustment for recording.
- + Custom hotkeys.

(Bugfix)

- + [Save video file] : Improvement of 1Gbyte limitation of video export.
- + Extension program - mail forwarding : support SMTP server using SSL (like a GMail).
- + some bug fix

(Change)

- + Version number : means target skype version.
- + Answering service : finish Video recording.
- + Answering service : finish [Answer by Video] and [Answer by Image].
- + Answering service : records calls without recorded file.
- + Video recording : auto separation when the size of video window is changed.
