

Recording for a podcast

Contributed by Administrator
Saturday, 30 May 2009

Tapur2.0 have the new function realtime MP3 recording, but 16kHz sampling rate support only. This is based on Skype's sound quality.

A simple Flash player frequently used by the podcast support 11kHz, 22kHz, 44kHz only. When you publish your MP3 file as podcast, you had better to convert the sampling rate by Audacity, etc.
